Press Release from Atlas Copco Gas and Process

BB5 launch complements CPC Pumps International API 610 range

Burlington, Canada - 17 February 2023: Already well known for its wide range of niche pumps, the Canadian-headquartered CPC Pumps International today extended its product range by launching its first-ever BB5 pump. Applications for CPC centrifugal pumps are traditionally in the wider refining and petrochemical industries. The addition of the BB5 is particularly timely, primarily because one of its major applications will be in helping to sustainably lower environmental impacts. It will be used in carbon capture, utilization and storage (CCUS), processes that are central to lowering CO2 emissions.

Fully compliant with API 610 requirements, CPC's BB5 pump has the option to swap out individual stages in the future, giving the customer the flexibility to adjust their hydraulics. This provides each pump with a wide-ranging, advanced hydraulic coverage that engineers tailor to meet the needs for each application.

Tushar Patel, General Manager of CPC Pumps International, explained that the launch of the BB5 is in keeping with the design ethos that has served the company well for so many decades. *"Each of the BB5 pumps we produce is individually tailored to meet the specific requirements of every customer,"* he said.

Part of Atlas Copco Gas and Process, a manufacturer of centrifugal compressors and expanders, CPC Pumps International already has a range of models available, ranging from its OH2 to OH5, VS1/VS6, BB2, and BB3 models. Its BB5 pump expands the range of heavy-duty process pumps for the company. The BB5 line now extends this product range with what many consider the most robust and extreme of the API 610 offerings.

About CPC Pumps International

CPC Pumps International Inc. is a part of the Atlas Copco Group, a world-leading industrial group present in more than 180 countries, over the span of over 145 years. It is a company that serves customers with innovative compressor, vacuum, power, and industrial technologies.

CPC Pumps International Inc. carries a heritage that dates back to 1957. We have cultivated a long history of partnership and collaboration. Pairing that with constant innovation for pump solutions throughout our history, we have been able to consistently respond to change and add value for every customer that has been a part of our legacy.

About Atlas Copco Gas and Process

At Atlas Copco Gas and Process, we help customers prepare for tomorrow by designing, building, and servicing turbocompressors, gas screw compressors, turboexpanders, and API 610 centrifugal pumps for the hydrocarbon processing, power generation (both conventional and renewable) and industrial gases industries. Our passionate people are dedicated to helping customers handle today's pressures while creating a sustainable future.
